## Making a module to show the V4 feed

Posted by da8ivr - 2008/05/01 09:49

---

I have been asked many times, how do i show my feed as a product feed on a module, so I have made this small tutorial for you here :)

All Products

Latest Products

Featured Products

Popular Products

custom Products

View info about V4 feeds

If you copy and paste that into code into your custom module as HTML, it will show your feed with the same CSS styling as your Main Menu links module.

Delete the bits you dont need, as I'm sure you wont need it all some part probably wont work, if you havent generated a feed yet.

All the best  
Ian

PS  
This is the same code i used for the Version V4 Feeds module in my right hand menu  
:)
